## The Best Thing Since Sliced Bread: FLOWSTOPPER™ plugging device

The FLOWSTOPPER™ plugging device is a new innovative Australian product designed by licensed plumber/inventor, Neal Borland. The smart plumbing tool makes obsolete traditional methods of plugging broken copper water pipes when carrying out repairs (including the once popular, loaf of bread).

Following initial success in the Australian market FLOWSTOPPER Pty Ltd is now looking to expand distribution both domestically and internationally.

The FLOWSTOPPER™ plugging device was developed by Neal Borland to overcome common difficulties faced by plumbers in blocking the residual flow of water during the repair of broken copper water pipes - which he'd identified through his own maintenance plumbing business.

After ten years of extensive R&D and two years of field-testing, the FLOWSTOPPER™ plugging device has now been launched – providing a clever solution to a familiar problem faced by plumbers.

The product has been extremely well received by Australia's plumbing industry and is being picked-up by plumbers from around the country who have already discovered the benefits on offer including, quicker repair time and reduced costs.
