

Invention Profile

Bin Beanie™

Inventor Objective: Seeking to expand distribution
IP Status: Provisional 2006903777
Development Stage: Product available for sale and distribution

Inventors, Pat and Janette Clarke developed the innovative Bin Beanie after becoming tired of continually having to spray their wheelie bins with insecticide to repel bugs.

The Bin Beanie is a specially designed mesh cover, which fits snugly over the top of a wheelie bin to prevent insects and vermin gaining access. Bin Beanie also prevents spiders from building webs under the lip and around handles.

Further product benefits offered by Bin Beanie include:

- Highly durable;
- UV resistant;
- Washable; and
- Can prevent potential garbage spillage if wheelie bin should accidentally fall over.

Bin Beanie is now commercially available and enjoying sales success, including international.
