

IP Licensing Opportunity

Surfboard Security Roof Rack Accessory

Inventor Objective: Seeking Licensee
IP Status: Provisional Patent Application AU2008904754
Development Stage: Working Prototype

Surfing enthusiast, Peter Naylor developed the Surfboard Security Roof Rack Accessory to provide a more effective and convenient anti-theft system for surfboards.

The Accessory consists of four individual clamps, which are attached to vehicle roof racks to lockdown/secure a surfboard and prevent potential theft.

The clamping system is locked into place and released using a simple screw and key system. Following installation only one clamp needs to be released to remove a surfboard.

The Surfboard Security Roof Rack Accessory offers a number of unique product benefits including:

- Can be used with different roof rack systems on market;
- Clamps swivel to meet shape of the surfboard for secure fit;
- Soft/spongy underside of clamps prevents damage to boards during transport;
- Can be left attached to roof rack system when not in use; and
- Quick and easy to use.

The inventor is currently seeking potential licensees to deliver the Surfboard Security Roof Rack Accessory to market. For further information, or to register your expression of interest please contact:
